Web Technologies I

Practical class: CSS

Find the slides @ E-studijas (CSS: Basics section)

Darja Solodovņikova – darja.solodovnikova@lu.lv
Maksims Ivanovs – m.ivanovs@lu.lv
Uldis Bojārs – uldis.bojars@lu.lv

Resources

- Slides (e-studijas): CSS basics

- W3Schools - CSS Tutorial
  - Basics (float, position, drop-downs,flexbox ...)
  - Advanced (web fonts, rounded images, ...)
  - RWD (responsive web design)

- Code examples
  - links in lecture slides
  - "Code Example" in e-studijas

Tools

- Visual Studio Code / NetBeans / Notepad++
- Browser (Chrome, Firefox, ...)

- **CSS validator** (W3C)
  - http://jigsaw.w3.org/css-validator/

- Developer tools
  - Chrome: Ctrl+Shift+I
  - Firefox: F12

Task

- Download & unzip exercise files (e-studijas)
- Create a meaningful (non-trivial) design using CSS
  - edit the **style.css** file only *
  - you may replace images, if necessary

* if you need to modify the HTML file, check with the lecturer

Required - CSS properties:

- Positioning schemes:
  - position: absolute;
  - position: fixed or sticky;
  - position: relative;
- float

- Flexbox properties:
  - display: flex,
  - flex-direction,
  - justify-content,
  - align-items,
  - flex-wrap.

- Other properties to create a meaningful design (e.g. colors, background, fonts, etc.)

Design Requieremements

- **Header and navigation:**
  - Style #club-banner as a visually distinct header and keep it visible at the top when scrolling using position: sticky or position: fixed.
  - Add appropriate background, spacing and typography.
  - Use float on the navigation list items to arrange them horizontally.
  - Add padding to the navigation links and a visible background-colour change on :hover.
- **Introduction and featured image:**
  - Style .intro-panel to present the introduction and featured image clearly.
  - Apply position: relative to .spotlight-frame.
  - Apply position: absolute to .spotlight-label to place the label over the illustration.
  - Make the overlay text legible using appropriate contrast, background and padding.
  - When hovering over .spotlight-frame, change the label's opacity or background colour.
- **Class cards:**
  - Use display: flex on .program-grid to arrange the six .workout-card elements in a row-based layout.
  - Use flex-wrap: wrap so cards can continue on new rows when space is insufficient.
  - Use justify-content to distribute space between cards and align-items to align them.
  - Give the cards consistent dimensions/spacing and a visible hover effect (e.g. background-colour change or adding a shadow).

- **Schedule and membership information:**
  - Style the weekly schedule table so headings, rows and cells are easy to read.
  - Make .member-panel a flex container with flex-direction: column so the visitor information blocks stack vertically.
  - Use padding and spacing to separate .member-note blocks.
  - You may also use flexbox for .club-details to arrange the schedule and membership panels side by side.
- **Footer:**
  - Use display: flex on .club-footer to arrange its two sections side by side.
  - Use justify-content: space-between (or an equivalent value that visibly separates them).
  - Use align-items: center to align the sections vertically.

Selector Requirements

Use the following types of CSS selectors in your styles:

- **Element selectors** (e.g., header, footer)
- **Class selectors** (e.g., .content, .sidebar)
- **ID selectors** (e.g., #main-header)
- **Descendant selectors** (e.g., nav ul li)
- **Pseudo-classes** (e.g., a:hover)
